

Javascript and DOM Self Assessment

Start Assignment

- Due Wednesday by 1:35pm
- Points 0
- Submitting a website url

Starting from the github repository created in class for the AirBNB Listings [https://github.com/john-guerra/Airbnb Listings demo page](https://github.com/john-guerra/Airbnb_Listings_demo_page)  ([https://github.com/john-guerra/Airbnb Listings demo page](https://github.com/john-guerra/Airbnb_Listings_demo_page)) or your own code built for this, implement a page that displays and loads all the first 50 listings from the JSON file using AJAX (JavaScript fetch and await) as done in class.

The page should show the listing name, description, amenities, host (name and photo), price, thumbnail, and some creative addition that separates your code from others. Please submit your github repo, and include a meaningful README that links to the deployment location (e.g. github-pages)

You can use the [airbnb listings2.zip \(https://northeastern.instructure.com/courses/249954/files/41466364?wrap=1\)](https://northeastern.instructure.com/courses/249954/files/41466364?wrap=1)  (https://northeastern.instructure.com/courses/249954/files/41466364/download?download_frd=1) or watch the class recording for reference

This is a non graded assignment. However, it can be used as a part of the participation grade. I'll probably will randomly call some of you to show your submission during class. You will have to peer-review a class mate submission. If you don't submit this grade or the peer review, you could get negative points in the participation grade
